|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1.1 – write equations for lines from 2 pts and parallel or perpendicular</p> | <p>1.2 – interpret and evaluate with function notation</p> | <p>1.3ab – determine the domain and range of a function</p> |
| <p>1.3c – graph piecewise functions</p>  | <p>1.4 – graph using function transformations</p>  | <p>1.5 – evaluate function combinations and compositions</p> <p>$f(x) = x^2 + 3x$ $g(x) = 2x - 1$</p> <ul style="list-style-type: none"> $f - g = (x^2 + 3x) - (2x - 1) = x^2 + 3x - 2x + 1 = x^2 + x + 1$ $fg = (x^2 + 3x)(2x - 1) = 2x^3 - x^2 + 6x^2 - 3x = 2x^3 + 5x^2 - 3x$ $g(f(x)) = g(x^2 + 3x) = 2(x^2 + 3x) - 1 = 2x^2 + 6x - 1$ |
| <p>1.6 – find the inverse function and its graph</p>  | <p>2.1 – graph and write quadratics in vertex form</p>  | <p>2.2 – graph polynomials in factored form</p> |
| <p>2.3a – factor polynomials through long or synthetic division</p> | <p>2.3b – use Rational Zero/Root Test to list all possible rational roots for a polynomial</p> <p>When factoring to solve, the solutions are of the form $x = \frac{\text{factor of constant term}}{\text{factor of leading coefficient}}$</p> <p>Ex: List all possible x-ints for $y = x^3 - 4x^2 + 5x - 2$</p> <p>$x = \frac{\pm 1, \pm 2}{\pm 1} = \pm 1, \pm 2$</p> | <p>2.4a – do arithmetic with complex numbers</p> <p>$(3 - 5i) + (4 + i) = (6 - 8i)$</p> <p>$(7 - 4i) - (6 - 8i) = (1 + 4i)$</p> <p>$(7 - 4i) + (-6 + 8i) = (1 + 4i)$</p> <hr/> <p>$\frac{(4+i)(5+3i)}{(5-3i)(5+3i)} = \frac{20+12i+5i+3i^2}{25+15i-15i-9i^2} = \frac{20+17i-3}{25+9} = \frac{17+17i}{34} = \frac{1}{2} + \frac{1}{2}i$</p> <p>$i = \sqrt{-1}$ $i^2 = -1$</p> |
| <p>2.4b – solve equations with complex answers</p> <p>$3x^2 - 2x + 5 = 0$</p> <p>$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$</p> <p>$x = \frac{2 \pm \sqrt{4 - 4(3)(5)}}{6}$</p> <p>$x = \frac{2 \pm \sqrt{-56}}{6} = \frac{2 \pm i\sqrt{56}}{6} = \frac{2 \pm i\sqrt{4 \cdot 14}}{6}$</p> <p>$\frac{1 \pm i\sqrt{14}}{3}$</p> <p>$\frac{2 \pm 2i\sqrt{14}}{6}$</p> | <p>2.5 – write equations for polynomials (no complex roots)</p> | <p>2.6 – identify asymptotes and intercepts of rational functions</p> |

| | | |
|-------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>2.7 – graph rational functions</p>  | <p>3.1a – graph exponential functions</p> | <p>3.1b – compute compounding exponential value problems</p> |
| <p>3.2a – evaluate logs based on definition</p> | <p>3.2b – graph logs and understand connection to exponential graphs</p> | <p>3.3 – simplify log expressions</p> $\log\left(\frac{x^3}{y^2}\right) = \log(x^3) - \log(y^2)$ $3\log(x) - 2\log(y)$ <hr/> $\frac{1}{2}\log(x) + 5\log(y)$ $\log(x^{1/2}) + \log(y^5)$ $\log(x^{1/2} \cdot y^5) = \log(\sqrt{x} \cdot y^5)$ |
| <p>3.4 – solve log and exponential equations</p> | <p>3.5 – write real-world exponential equations</p> | <p>4.1 – convert between radians and degrees and graph angles</p> |
| <p>4.2 – find trig values on unit circle</p> | <p>4.3ac – solve triangle problems using trig</p> | <p>4.3b – prove using basic trig identities</p> $\csc\theta \cdot \tan\theta = \sec\theta$ $\frac{1}{\sin\theta} \cdot \frac{\sin\theta}{\cos\theta} = \sec\theta$ $\frac{1}{\cos\theta} = \sec\theta$ $\sec\theta = \sec\theta$ $\cot\theta \cdot \sin\theta = \cos\theta$ $\frac{1}{\tan\theta} \cdot \sin\theta = \cos\theta$ $\frac{\cos\theta}{\sin\theta} \cdot \frac{\sin\theta}{1} = \cos\theta$ $\cos\theta = \cos\theta$ |
| <p>4.4 – given one trig value on circle (and the quadrant) find others</p> | <p>Use this space for anything else you feel you need on your sheet.</p> | |
